## **DIY SAFE Infant Feeding Sanitation Kit**

When water is not safe to drink or to reduce germs on feeding items more than usual, you can use these components to make water safe to drink and sanitize feeding items. See booklet (linked on <u>safeinfantfeeding.org/famililes</u>) for how to use and other instructions.

- A small plastic bin 6 qt shoebox size works well
- Bleach regular, additive-free, not splash-less.
  NO fragrance, low/No-splash, or fabric protectant. Regular Clorox & teal green Cloralen are safe types.
- Baby bottle brush with nipple cleaner
- (3 oz) disposable cups (12-15 in a Ziploc bag)— to feed baby if can't clean bottles
- **Syringe** 5 mL or 10 mL—for measuring bleach
- **Dish soap** 6-12 oz size if storing in bin

## **Steps to Sanitary & Safe Infant Feeding Supplies in Emergency Situations:**

Make water safe to drink —>	Clean & rinse —>	Sanitize —>	Air Dry
Filter if necessary.	Use water that's	Boil or disinfect.	Use a mesh bag or
Boil or disinfect.	safe to drink.	Do NOT rinse.	sanitary surface.
